## NLP Tasks

### 1. Encoding

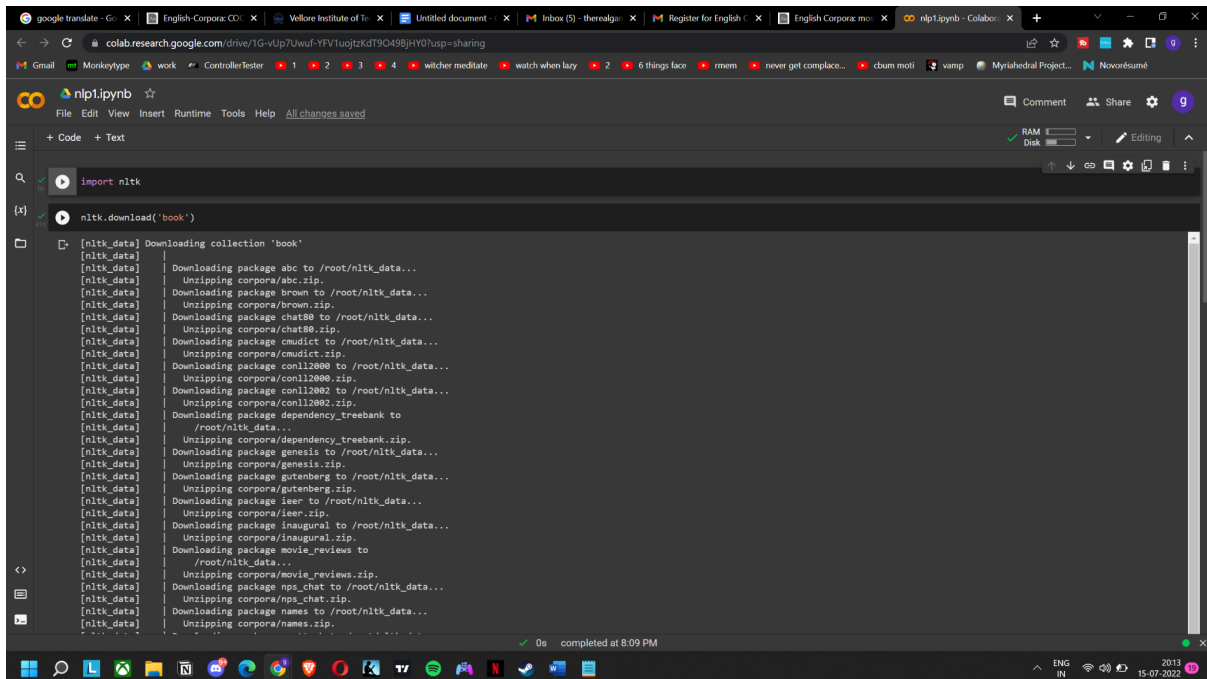

## 2. 'modi' COCA

We can see that the popularity of modi in articles has been constantly increasing to the point where it has reached almost 2 words per million.

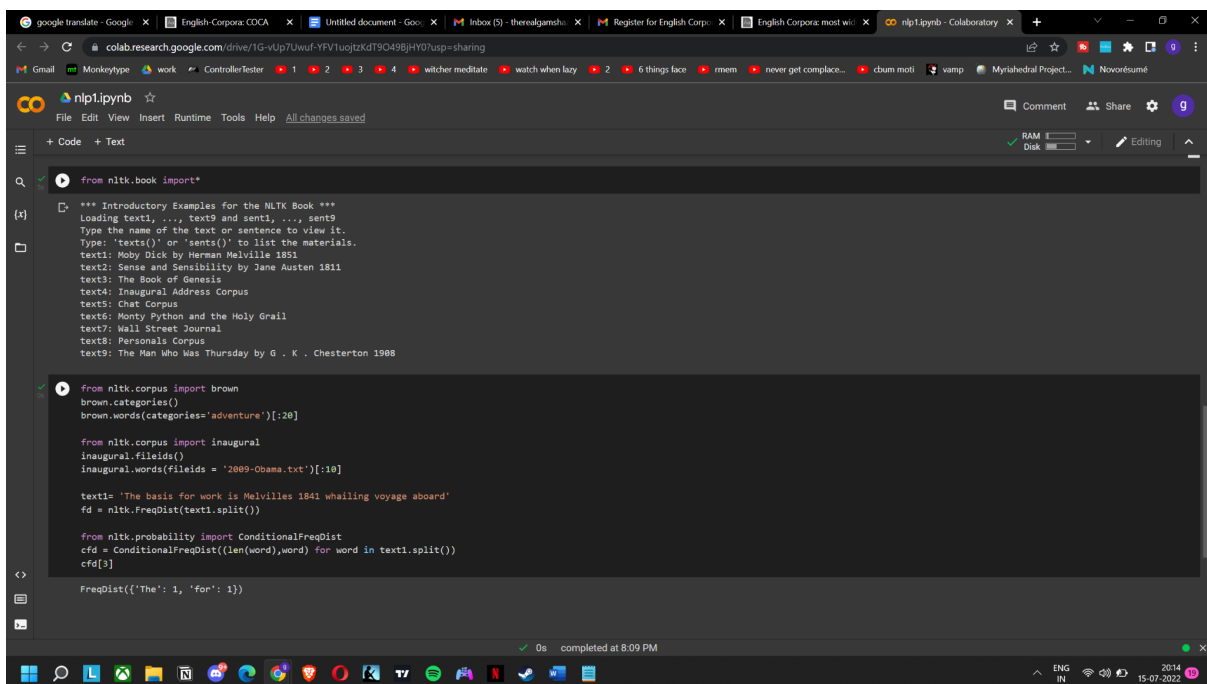

### 3. Read book and frequency

The screenshot shows a JupyterLab notebook interface with a code editor and a console output. The code in the editor is:

```
import nltk
nltk.download('book')
```

The console output shows the progress of downloading the 'book' collection, which includes various corpora like 'abc', 'brown', 'cmudict', 'conll12800', 'conll12800.zip', 'dependency\_treebank', 'gutenberg', 'ieer', 'inaugural', 'movie\_reviews', 'nps\_chat', and 'names'.

The screenshot shows a JupyterLab notebook interface with a code editor and a console output. The code in the editor is:

```
from nltk.book import*

*** Introductory Examples for the NLTK Book ***
Loading text1, ..., text9 and sent1, ..., sent9
Type the name of the text or sentence to view it.
Type: 'texts()' or 'sents()' to list the materials.
text1: Moby Dick by Herman Melville 1851
text2: Sense and Sensibility by Jane Austen 1811
text3: The Book of Genesis
text4: Inaugural Address Corpus
text5: Chat Corpus
text6: Monty Python and the Holy Grail
text7: Wall Street Journal
text8: Personals Corpus
text9: The Man Who Was Thursday by G . K . Chesterton 1908

from nltk.corpus import brown
brown.categories()
brown.words(categories='adventure')[:20]

from nltk.corpus import inaugural
inaugural.fileids()
inaugural.words(fileids = '2009-Obama.txt')[:10]

text10 = 'The basis for work is Melville's 1841 whaling voyage aboard'
fd = nltk.FreqDist(text1.split())

from nltk.probability import ConditionalFreqDist
cfd = ConditionalFreqDist((len(word),word) for word in text1.split())
cfd[3]

FreqDist(['The': 1, 'for': 1])
```

The console output shows the results of the code execution, including the list of corpora and the frequency distribution of words in the 'adventure' category.

4.

## Application of CORPUS

The creation, publishing, and revision of dictionaries benefit greatly from corpus linguistics since it allows linguists to quickly access instances of words or phrases from millions of spoken and written texts. Additionally, lexicographers have immediate access to the most recent data because corpora are continually expanding and adding new texts.
